

Central to the development of the infrastructure is its optimum utilization. Trainers have been appointed to teach members to use the computers upgraded with the latest software and technology made available in the Enabling Unit set up under UGC guidelines. There had in the past been little else besides the educational tools of Braille, daisy players and recordings and some computer enabled software for the Visually Challenged students, which were obligatory for a HEI to offer, under compulsory admission under PH category in the College and the Hostel. The College initiated the policy of distribution of CD players to all its VH students and subsequently, notebooks from the university to individual students. Software and technology are updated regularly. White sticks are distributed. Other needs are met on request and assessment.
