IPC/128/04

URGENT

For Attention of the College Community

As all of us are aware, there is an acute shortage of water in the city which has affected supplies, and also has an impact on the electricity supply. The intense heat in the region has added to this situation. The College has always taken adequate measures to ensure the distribution of these resources, subject to their availability.

You are all advised to manage water, electricity and other resources with the utmost care, and also develop your systems for management of these resources in the ongoing local and global warming conditions.

We all hope that this crisis in the city will pass soon.

Principal
